## ABOUT THE MARVEL COMIC COLLECTOR'S INFORMATION RESOURCE GUIDE

The Marvel Comic Collector's Information Resource Guide is a collection of resources targeted specifically at the UK-based Marvel Comics collector. It is aimed at collectors of all levels of experience, from beginners who are just starting out building their collections, to the veteran collector who may even be wishing to sell on their collection. Those setting up educational collections for libraries or schools may also find information of interest here.

This Guide compiles a list of a wide range of resources, from stores that sell comics and storage supplies, to online tutorials and computer software. Depending on your experience level, it is likely like you will have different information needs. Therefore, each resource has been tagged for your level of experience, whether veteran, intermediate, or beginner.

Where possible, the listings are designed in alphabetical order for ease of use. Where appropriate, icons have been added to denote extra services the resource provides that may be of use to you.

Please note that this is *not* a comprehensive guide, nor is it attempting to be one. It aims to lay out the most popular and reliable sources in each area of interest, and UK-based resources are given precedence over those that are US- or European-based. Hopefully, you will be able to find a resource that is best suited to your needs.

All web links are working as of 1 May 2012.

## REFLECTIONS ON THIS GUIDE

The creation of this guide was a lesson in both information retrieval, information classification, and in the presentation of that information. The domain of comics is a difficult one to pin down, because whilst it deals with populist, seemingly typical 'every day' information, it is also considered a niche, hobbyist subject that is rather ill-defined, with current resources put together by mostly fans and amateurs. As far as is known, there is not yet a precedent for a comics user guide available.

Users come from all backgrounds, and all seem to have different needs. For example, there are the dedicated, serious collectors who often make a business out of buying and selling issues. Then there are those that hold onto their collection and hoard. Casual readers may dip in and out of the domain, reading a large amount for a few months, then buying nothing for years before they decide to wade back in. These users often find they have to play catch-up. Satisfying all these broad information needs is a challenge. This drove the need for a system of 'tagging' certain entries of the guide which would appeal to a certain kind of user – the experienced, the intermediate, and the beginner.

What soon became evident was the need to whittle down the vast amount of resources that were gathered for the collection. There were so many potential entries that were relevant that ultimately there was no space for. As such, a ruthless system of paring down was needed. This involved careful analysis of what information users would *really* be looking for and what they would really be interested in. So whilst graphic novel sections in book shops and libraries could have been added as a section, they would be of no real use to collectors as they could not be added to a collection.

Geographical resources, such as comic stores section, were a challenge to write. They involved knowledge of stores that I did not possess, and therefore the section in question was very London and the South-East-centric. A more 'professional' guide would need to be the work of several people, as this particular guide was limited mostly to the extent of my own knowledge of the domain. Therefore, the resources are more likely to be biased toward stores in a certain area, or blogs about a certain character, or so on. I tried to minimise this effect as much as was practicably possible.

It became increasingly clear in the writing of the guide that additional information was needed – information that would be of great importance to users. Thus, the idea of 'tagging' certain entries with icons was born. Users are particularly concerned with features that make

their search experience more efficient. They like to know when they can use Paypal, or shop through eBay, or get a smartphone app when they have the available technology or an appropriate account. Therefore, the pertinent icons were added to the resources that had access to such services, e.g. the official Marvel website has several mobile phone apps, so Android and App Store icons were added to the entry.

Presentation was also an issue at several points, and had to be changed often. Presenting information must be done in a logical order, yet in a manner that users find most useful and easy to understand. Knowledge of the domain is essential for this. For example, one resource may be classed both as a forum *and* a webstore – perhaps also as a blog, or a bricks-and-mortar shop. Under which section should it be placed? It is vital to know what the average user’s perception of the resource is beforehand in order to make a sound judgement. The creator of the guide should ask him or herself how most people use the resource, and what they most often go to it for. This can be a complex task with resources that have multiple functions.

To sum up, creating an information resource guide is a challenge – an enjoyable one – but one that requires much forethought and planning. It is easy to see how they can become cluttered, illogical and irrelevant to users’ information needs. Each entry must be succinct and easy to read, yet provide detail that is as rich as possible. Lastly, it must seek to be objective and unbiased. These are all hurdles that the information professional must pass successfully in order to create a reliable guide that is meaningful to its users.
